Sports Injuries

Many sports professionals and teams in the NFL, NBA, NHL, PGA, LPGA, and MLB use the ARP Rx100 technology to treat injured athletes and to prevent muscle-related injuries, helping them to recover more rapidly. The ARP Rx100 is not only useful in treating injuries, but it also aids in the recovery of muscles from extensive training or over-exertion.

Increase Range of Motion

The ARP Rx100 is often recommended by physicians to aid in the treatment of muscle related injuries. It can also help to increase range of motion and slow or prevent *disuse atrophy.

Helps Chronic Problems Too

Treatment with the ARP Rx100 treatments may be beneficial for many muscle conditions—whether they are in the acute or chronic stage.

When health problems persist for longer than the "normal" recovery time, they are deemed to be chronic. When conditions become chronic, patients tend to become discouraged and give up hope.

Even doctors are sometimes amazed at how often the ARP Rx100 benefits patients suffering from long-standing, residual, chronic conditions.

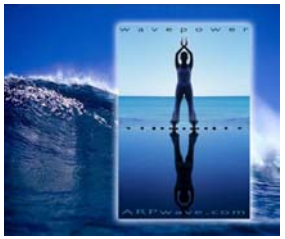

THE PURPOSE OF THIS PAMPHLET IS TO HELP YOU BETTER UNDERSTAND THE ARP Rx100 ENERGY THERAPY

ARPwave™
Accelerated Recovery Performance

The ARP Rx100 is a proprietary non-invasive muscle stimulator.

The ARP Rx100 is different from other types of electrotherapy. One key to the Rx100's uniqueness is its waveform, which allows the electrical current to penetrate deep within the tissues being treated. Another is its combination of electrical frequencies. And yet another is the ability to put the patient in motion during treatment.

Safe and Effective

The ARP Rx100 has many advantages over all other electrical stimulators. The main advantage is that it is harmonious with the body and it does not cause the body to concentrically contract muscles. This allows the patient to be put in motion during treatment. Patient improvement is often noticed after the very first treatment.

Accelerated Recovery Performance

The ARP Rx100 may treat muscle issues relating to elbows, shoulders, and knees. The ARP Rx100 also helps relax spasms in your back and other muscle groups.

Treatment with the ARP Rx100 will help prevent or retard muscle atrophy when a limb is in a cast or immobilized. It will help increase local blood circulation as well. The ARP Rx100 can help build strength in muscles and build resiliency. It is also useful in restoring normal freedom of motion in patients experiencing stiffness or limitation of movement.

YOUR DOCTOR KNOWS BEST

If you are experiencing pain or stiffness,
or have suffered a muscle injury,
your doctor can help you determine whether
the ARP Rx100 might help.

Not a Cure-all or Panacea

The ARP Rx100 is a relatively new method of treatment. In many cases, it is proving to be an extremely important and desirable addition to therapy treatments. It can be a significant factor in the restoration of good health, but is not a cure-all or panacea.

Restoring Good Health

A successful treatment program requires full cooperation between doctor and patient. It is important to follow your doctor's recommendations concerning your ARP Rx100 treatment program — and all other forms of treatment.

Your doctor is concerned not only with restoring good health, but also with the prevention of future health problems. The better patients understand the purpose of their treatments, the better they cooperate in following treatment recommendations and the quicker they improve.
